

ProphyBrite® Air Polisher

Brite Smiles All Around

With this dental air polisher, clogging and wrist fatigue will be the least of any dental hygienist's worries.

It has a unique system and ergonomic design. The ProphyBrite provides quick and gentle patient care and requires no installation. It works best by delivering a fine sodium bicarbonate and water slurry for easy removal of plaque and stains. The powder flows through this handpiece smoothly and efficiently, ensuring it cleans only the desired areas of the mouth. There are very minimal clogs when using this unit, as long as it gets cleaned properly. It's the ideal dental air polisher for cleaning and preparing teeth prior to placement of orthodontic brackets, sealants, bleaching, and fluoride treatments.
