

Acid Etch

Acid Etch creates a deeper etch pattern for easier application of bonding materials.

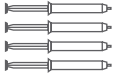

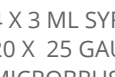

About Acid Etch

For increased patient comfort and easy clean-up, Acid Etch is highly viscous, allowing for more accurate placement on enamel or dentin. Material will not slump, slide or run. Easily placed and controlled consistency. Acid Etch is odorless and tasteless, and available in a 37% concentration. It is also silica and glycerin-free.

Features & Benefits

- Transparent aqua blue
- Silica-free and glycerin-free
- Highly viscous, allowing for more accurate placement on enamel or dentin
- Odorless and tasteless for ultimate patient comfort
- Easily removed with a high speed evacuator
